

ABSTRACT

A method and system for supplying management and maintenance parts which enables earlier reception of orders of parts required for management and maintenance of products.

5 A physical distribution management (logistics) server 3 is provided to connect users 6, a manufacturer 6, and cooperating manufacturers 9. The users 6 are connected to said logistic server 3 through Internet or the like. Said logistic server 3 contains a management and maintenance parts supply system

10 2 and a parts information (spare parts information) database which stores parts information required for management and maintenance of products. The users select required parts from said database and send information of the selected parts to said manufacturer.
